

# Black River –Springs Area/Tubbs Ck

By Tim Cwalinski, Fisheries Biologist MDNR

## 1. Black River – Springs Area/Tubbs Ck

- a. population estimates for 2,200 ft or 2,400 ft reach
- b. years 1991, 2006, 2007
  - catch of age-0 fish higher in 1991 compared to most recent surveys
  - growth today very good for this reach as in past
  - densities of 8-10 inch fish have declined each year but only have 3 years to go on
  - densities of larger fish (10"+) have not shown any pattern and were higher in 2006
